programming language is prolog, developed by alain colmerauer, robert kowalski and phillippe rousel. problems in prolog are stated as facts, axioms and logical rules for deducing new facts. prolog is mathematically founded on predicate calculus and the theoretical results obtained in the area of automatic theorem proving in the late 1960s. ii. **advanced prolog - babeş-bolyai university** - advanced features of prolog lp&zt 2005 specification of findall/3 schema: findall(+template, +goal, -list) prolog will search for every possible solution to the goal goal (through backtracking). for every solution found, the necessary instantiations to template are made, and these instantiations are collected in the list list. **cs621: artificial intelligence - iit bombay** - cs621: artificial intelligence pushpak bhattacharyya cse dept., iit bombay lecture 25, 26, 27-prolog (with actually tested himalayan club example) 27, 28 th (morning, evening) september, 2010. introduction programming in logic ... fundamental principle of prolog programming always place the more general rule after a specific rule. cut **artificial intelligence through prolog by neil c. rowe** - throwing around of artificial intelligence terms by people who don't understand them. but artificial intelligence is a tool for complex problems, and its program examples can easily be forbiddingly complicated. books attempting to explain artificial intelligence with examples from the programming language lisp have repeatedly demonstrated this. **prolog - webcourse.technion** - prolog.1 prolog prolog.2 textbook and software title prolog programming for artificial intelligence author ivan bratko get the software download pl.zip from the course site extract the zip file to c:\prolog (or whatever) you should be able to do the same in the pc farm (extract to your personal folder) run by c:\prolog\bin\plcon (or plwin) **artificial intelligence (lisp) - idc-online** - the main programming languages used in ai are lisp and prolog. both have features which make them suitable for ai programming, such as support for list processing, pattern matching and exploratory programming. both are also widely used - prolog especially in europe and japan, and lisp in the us. this wide use **prolog step-by-step - school of informatics** - [shoham 94] good on ai applications of prolog for those with a knowledge of the basics;
